

Gated viewing Lynx cameras

*Images of outputs of the camera
Intruder detection of a person*

Buildings at 600 meter distance in heavy snow. There are lots of intense lamps at the area.

The top image shows image with active IR light turned on and there are severe reflexes of the snow flakes and fog in the air

Bottom image is gated and we have removed what is in the air almost completely.

It is easy to understand that gated viewing with all its settings always is the best choice for advanced nivas systems in critical applications. Harbours and airports are typical areas for gated cameras

Many of our productr are protected by patents and patent applications
