

## 3D laser scann of Af Chapman

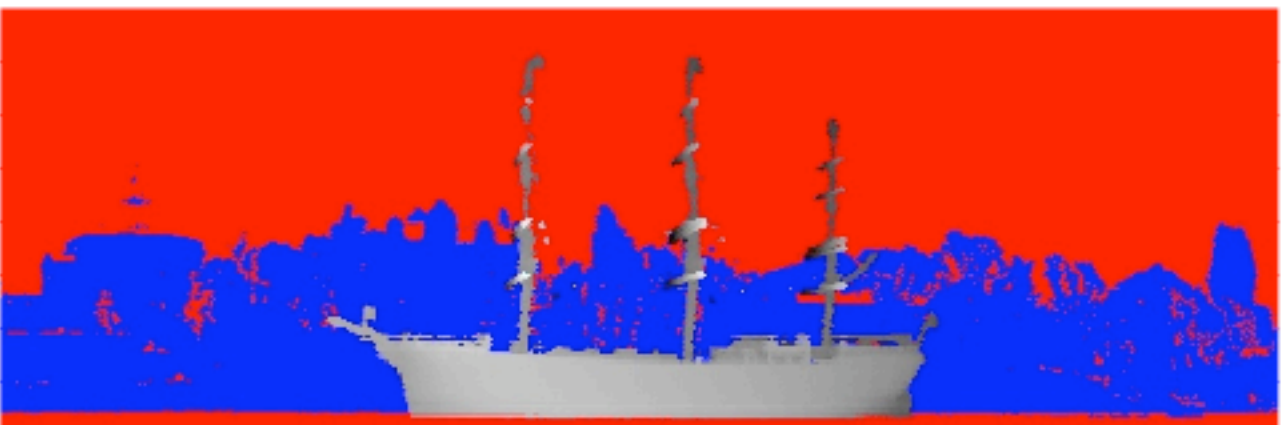

2009-12-14 Page 1 of 1

View of Af Chapman the floating youth hostel in Stockholm city

Same view in ladar 3D view. Readings from 180-290 meter in distance. White is closer and black is far away. Blue is beyond the max distance we set for the visible grey scale.

Ladar view 198-223 meter in distance depth Here we get shore installations beyond the grey scale range. When this was measured we used a hand scan up and down and the profile scanner horizontally. This makes accuracy a bit doubtful as I scanned by my hands. The 1500 meter distance range finder has +/- 10 cm in distance resolution and operates at 12500 Hz. The mirror scanner we use at about 10 Hz when this was measured.
