

## **Ear channel scanned in 3D by a non contact optical scanner**

Here we show 3 perspectives of a laser scanned ear channel.. This was scanned  
By a new technology scanner for exact mapping of what dimensions are inside the human ear.

Accuracy is in the area of 0.1-0.01 mm

Max dimensions are about diameter 10 mm and depth 20 mm

This scanner is planned for other applications in medicine and industry
